

The scatter plot displays the relationship between the Age of patient (X-axis, 20 to 100) and a response variable (Y-axis, 0 to 100). Two groups are compared: 'No' (red dots and line) and 'Yes' (teal dots and line). The 'Yes' group shows a positive correlation, while the 'No' group shows a slight negative correlation.

Age of patient	Response (No)	Response (Yes)
